

FABIEN CAPPELLI

TECHNICAL IMPLEMENTATION SPECIALIST

Solution Design · Knowledge
Systems · Applied AI

SKILLS

Applied AI & Knowledge Systems

Structured outputs and prompt design

Retrieval-ready knowledge and RAG
concepts

Metadata, taxonomies and contextual
grounding

Human-in-the-loop validation and guardrails

LLM-assisted documentation and
automation

Solution Design & Implementation

End-to-end SaaS implementation

REST APIs, JSON and data mapping

Workflow orchestration and troubleshooting

Structured data models and validation logic

Regulated process translation

Documentation & Content Systems

Knowledge architecture and reusable
content

MkDocs, Git and CI/CD workflows

API and process documentation

Content governance and quality checks

Collaboration & Tools

Cross-functional workshops and alignment

Requirements translation and technical
communication

Python, SQL, Git, Postman, Linux / Windows

Analytical and structured problem-solving

PROFESSIONAL SUMMARY

Technical Implementation Specialist working at the intersection of SaaS delivery, API integration, data modelling, technical documentation, and client-facing solution design. Translates business and regulatory requirements into reliable workflows, system configurations, and implementation strategies.

Designs practical automation and AI-assisted systems using Python, structured outputs, metadata, retrieval patterns, and explicit validation. Current work includes a documentation ecosystem built for both human use and AI-assisted retrieval, together with tooling that explores and validates complex API data relationships.

Combines rigorous training in linguistics, mathematics, and data science with a strong focus on clarity, consistency, explainability, and human review.

CURRENT POSITION

OPTEL - Technical Implementation Specialist (Optchain)

Limerick (Remote) • 07/2025 - Current

- Lead implementation of complex SaaS workflows across UI, REST APIs, structured data, customer processes, and post-go-live support.
- Translate regulatory, product, and customer knowledge into structured workflows, validation rules, implementation guidance, and reusable technical assets.
- Design and troubleshoot API integrations involving JSON payloads, data mapping, multi-entity models, asynchronous processing, and cross-system dependencies.
- Conceived and built a new documentation ecosystem from the ground up, replacing a static 100-page PDF user guide with a maintainable MkDocs platform structured around YAML metadata, taxonomies, reusable content, diagrams, API patterns, and CI/CD publishing for both human readers and AI-assisted retrieval.
- Partner with Product, Engineering, Support, domain experts, and customers to turn ambiguous requirements into scalable processes with clearly documented boundaries and risks.
- Develop Python tooling to explore API data, reconstruct relationships, validate traceability continuity, and surface explainable findings for implementation teams.

EDUCATION

OpenClassrooms

Paris • 12/2025

RNCP Level 7 Certification:

Expert in Data Science

IBM / Coursera

02/2026

RAG and Agentic AI

Sorbonne Université

Paris • 07/2024

Bachelor of Science:

Mathematics

Université Jean Jaurès

Toulouse • 12/2013

Ph.D.:

Linguistics

SELECTED AI & AUTOMATION PROJECTS

Robie

End-to-end local voice assistant on Raspberry Pi, combining Vosk speech recognition, Qwen via Ollama, fuzzy intent matching, text-to-speech, and audio playback.

YouTube RAG Summarizer & Q&A

Local RAG application that retrieves YouTube transcripts, builds a FAISS semantic index with local embeddings, and generates grounded summaries and answers using Qwen via Ollama.

Release Video Generator

Automated Jira-to-video workflow combining data extraction, LLM-assisted script generation, text-to-speech, and FFmpeg rendering.

EARLIER EXPERIENCE

Wix - Customer Care Expert - French Speaking - Risk

Dublin (Hybrid) • 02/2024 - 07/2025

- Resolved complex, high-sensitivity customer issues involving payments, fraud prevention, account restrictions, and platform workflows.
- Investigated root causes across system behaviour and configurations, escalating clear technical findings to specialist teams.
- Explained technical constraints and decisions clearly to non-technical users while maintaining trust in stressful situations.
- Developed strong production-support, prioritisation, and cross-functional coordination practices in a high-volume environment.

Mastek — Agri Machinery & Innovation - CAD Technician and PLM Implementation Specialist

Cootehill, Ireland • 01/2018 - 02/2024

- Implemented and continuously improved a Product Lifecycle Management system supporting structured engineering and manufacturing data.
- Built an automated validation process combining Power Automate, VBA, SQL, Python, and PLM data, reducing checks by approximately 90% across batches of 200+ drawings.
- Created customer-facing manuals, process documentation, user guides, and governance procedures for complex technical workflows.
- Translated operational needs into structured data rules, automation logic, and reliable digital processes.
- Improved system adoption, consistency, and traceability through documentation, training, and workflow standardisation.

Dr. R. A. Hatch - Research Assistant

Remote • 08/2011 - 12/2024

Transcription, translation, and analysis of French, Italian, and Latin historical manuscripts, requiring rigorous interpretation and precise knowledge organisation.

LANGUAGES

French Native Language

English Fully proficient
